                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This consensus is derived from a shotgun assembly that has been manually curated. It is the best representation of the BAC that we can generate without further laboratory work. The draft assembly has been edited, and if possible, ends identified by vector as well as by BAC end sequences, and contigs ordered and oriented. Bases that are not Ns are either above 020 or manually edited. This assembly was performed with phrap. All trace files for this project are available at the NCBI trace repository (http://www.ncbi.nlm.nih.gov/Traces/trace.fcgi?). An exact list of reads used in this assembly are available at http://www.broad.mit.edu/annotation/plants/maize/randomclones.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bharti, AK and Messing, J: The Plant Genome Initiative at Rutgers, Waksman Institute, Rutgers, The State University of New Jersey, 190 Frelinghuysen Road, Piscataway, NJ 08854, USA (http://pgir.rutgers.edu)

                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

Submitted (02-OCT-2004) Institute of Botany, Academia Sinica, 128,

Section 2, Academia Road, Nankang, Taipei 11529, Taiwan

On Aug 26, 2004 this sequence version replaced gi:51339037.

Genes were predicated from the integrated results of the following:

BLASTN2.0, BLASTX2.0, GENSCAN (Chris Burge,

http://genes.mit.edu/GENSCAN.html), Fgenesh

(http://www.tigr.org/softlab/glimmer/glimmer.html), TWINSCAN

(http://www.tigr.org/softlab/glimmer/glimmer.html), The sequence was

searched against the Swiss-Prot+TrENDI protein database, the NCBI

Plant EST database, the TIGR Rice Gene Index and the rice

full-length cDNA database (KOME,

http://cdnaon/dna_affor Go:n/CDNA/) Annotated Genes are named to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                http://cdna01.cha.affrc.go.jp/cDNa/). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with BST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. This clone overlaps with OSUNBB0012G21 (accession # AC135421) and OJ1576_F01(accession # AC097176).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

This colone sequence is one of 5,000 Ceres full-length cDNAs made available to TIGR and Genbank. The following quality assessment of this set was done by comparison with known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the C-terminal end of the encoded protein. Please note that these cDNA sequences are derived from the Ws or LACE cootypes and therefore may contain polymorphisms when compared to sequences from Col-0. Genset carried out the library production and sequencing of the full-length clones. Ceres, Inc. carried out the clustering of the coation/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2 (bases 1 to 1161)

The genome sequence and structure of rice chromosome 1
NE 2337376
NE 2337376
on Jul 17, 2002 this sequence version replaced gi:19773519.
Genes were predicted from the integrated results of the following:
GENSCANI.0, BLASTNZ.0, BLASTXZ.0 as well as SplicePredictor
(October 1998 version). The genomic sequence was searched against
NCBI NonRedundant Protein database, nr
(ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at
RGP. Protein homologies of the coding regions were searched against
NCBI NonRedundant Protein database with BLASTNZ.0. ESTs represent
the identified cDNA sequences using BLASTNZ.0. With the
corresponding DDBJ accession no. and RGP clone ID.
A gene with identity or significant homology to a protein is
classified based on the protein name to indicate the homology level
such as same name, 'putative-' and 'like protein'. A gene without
significant homology to any protein but with EST homology (covering
almost the entire length of partial sequence) is classified as an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 860

A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orientation of the sequence is from M13 to -21M13 of the BAC clone. This sequence of O31005 B10 clone has an overlap with P0516D04 clone (DDBJ: AP003276) at the position 1 to 103,355 of 5' end. The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Jans sequencing data. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /organism="Oryza sativa (

                                                                                                                                                                                                                                                                           Malibut CA 90265, USA

This clone sequence is one of 5,000 Geres full-length cDNAs made
available to TIGR and Genbank. The following quality assessment of
this set was done by comparison with known proteins: two percent
are 3'-truncated; approximately two percent represent alternative
splice variants, including unspliced introns and spliced exons; one
percent may contain premature stop codons; five percent may have
frame shifts in a coding region. A sequence is considered to be
5'-truncated if it lacks the translation initiation start (ArG). A
sequence is considered to be 3'-truncated if it lacks the translation please note that these cDNA
sequences are derived from the Ws or LAer ecotypes and therefore
may contain polymorphisms when compared to sequencing of the
full-length clones. Ceres, Inc. carried out the clustering of the
full-length clones. Selection of clones, and sequence assembly.

Spermatophyta; Magnoliophyta; hiliopsida; Poales; Poaceae;
Ehrhartoideae; Oryzeae; Oryza.
                                                                                                                                                                                                                       This is a complete sequence. Genes were identified by a combination of several methods: Gene prediction programs including Egenesh (http://www.softberry.com/), genscan (http://CCR-081.mit.edu/GENSCAN.html), GeneMarkHWM (http://genemark.biology.gatech.edu/GeneMarkh/), tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/), searches of the complete sequence against NCBI none redundant protein database (ftp://ncbi.nlm.nih.gov/blast/db) and the EST database at NCGR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            OSJN00107 187154 bp DNA Oryza sativa genomic DNA, chromosome 4,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 On Jul 9, 2003 this sequence version Web site: http://www.ncgr.ac.cn
